

# TRIGONOMETRY

Chapter 7,8 and 9

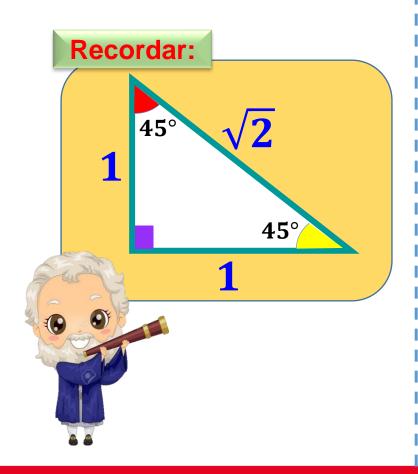

**REVIEW** 

### Efectúe:

$$A = (5\cos 45^{\circ} + 6\sin 45^{\circ})\sec 45^{\circ}$$

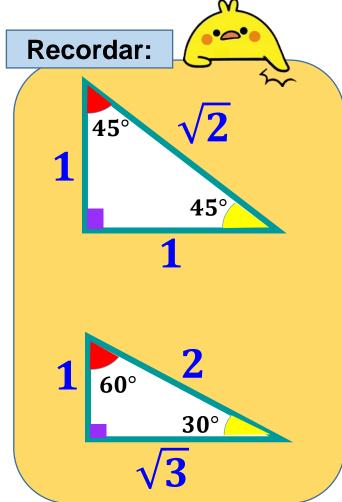

### Resolución:

$$A = \left[5 \times \left(\frac{1}{\sqrt{2}}\right) + 6 \times \left(\frac{1}{\sqrt{2}}\right)\right] \times \left(\sqrt{2}\right)$$

$$A = \left\lceil \frac{11}{\sqrt{2}} \right\rceil \times \left(\sqrt{2}\right)$$

$$A = 11$$

Halle el valor de:  $A = (6 \cot 45^\circ)^{\csc 30^\circ} + \left(12\sqrt{3} \tan 60^\circ\right)^{\sec 30^\circ}$ 

# Resolución:

$$A = [6 \times (1)]^{2} + [12\sqrt{3} \times (\sqrt{3})]^{\frac{1}{2}}$$

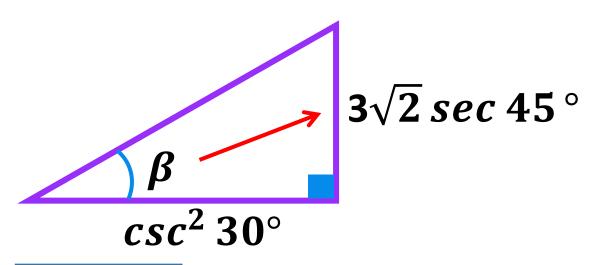

$$A = 36 + [36]^{\frac{1}{2}}$$

$$A = 36 + \sqrt{36}$$

$$A = 36 + 6$$

$$\therefore A = 42$$

Del gráfico, calcule  $tan \beta$ .

# 

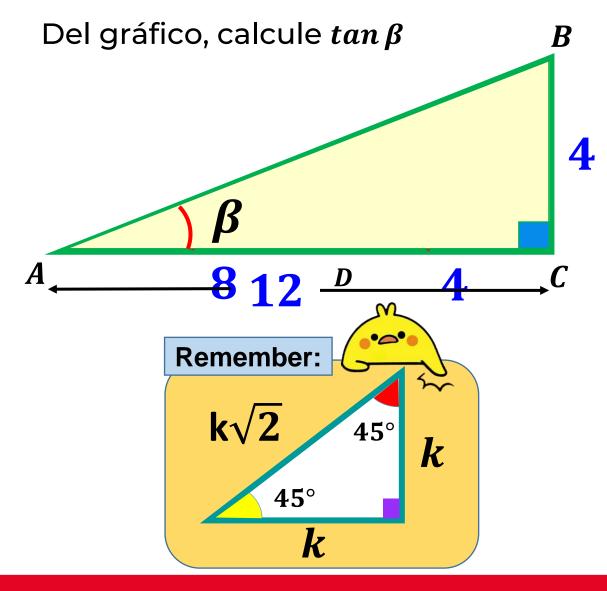

## Resolución:

$$tan \beta = \frac{3\sqrt{2} \sec 45^{\circ}}{\csc^2 30^{\circ}}$$

$$\tan \beta = \frac{3\sqrt{2} \times (\sqrt{2})}{(2)^2}$$

$$tan \beta = \frac{6}{4}$$

$$\therefore \tan \beta = \frac{3}{2}$$

## Resolución:

En el  $\triangle BCD$  (Notable de 45°)

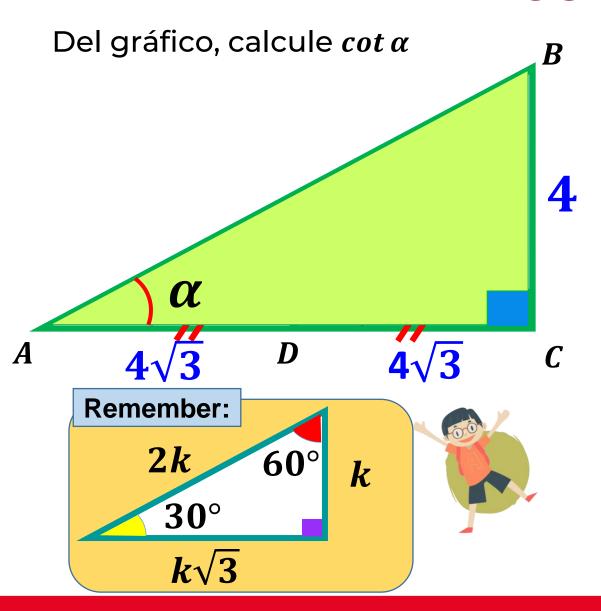

Se observa: DC = 4

$$\Rightarrow BC = 4$$

### **Calculamos:**

$$\tan\beta = \frac{4}{12}$$

$$\therefore \tan \beta = \frac{1}{3}$$

## Resolución:

En el  $\triangle BCD$  (Notable de 30° y 60°)

$$BC = 4$$

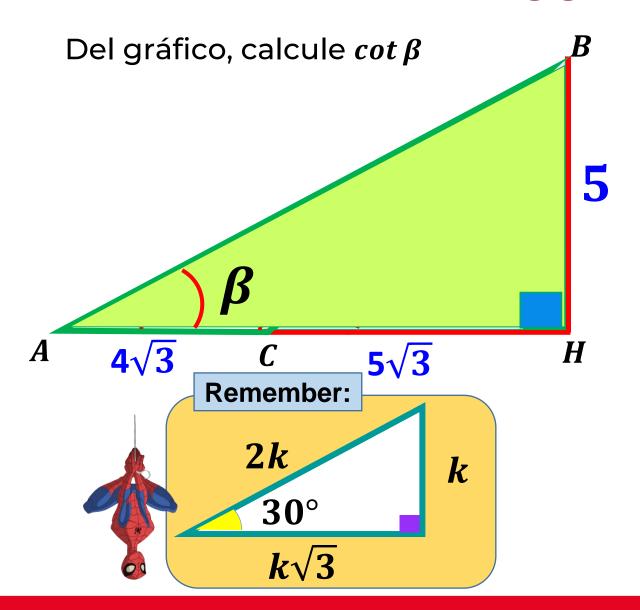

$$k=4$$

Luego: 
$$DC = 4\sqrt{3}$$

**Calculamos:** 

$$\cot \alpha = \frac{8\sqrt{3}}{4}$$

$$\therefore \cot \alpha = 2\sqrt{3}$$

# Resolución:

En el  $\triangle BHC$  (Notable de 30° y 60°) Se observa

$$BC = 10$$

$$2k = 10 \implies k = 5$$

### Luego:

$$BH = 1(5) = 5$$

$$CH = \sqrt{3}(5) = 5\sqrt{3}$$

$$\therefore \cot \beta = \frac{9\sqrt{3}}{5}$$

Efectúe 
$$E = \frac{b}{a}$$
 , Si  $sen 24^{\circ} \cdot csc \ a = 1$   $tan 36^{\circ} \cdot cot \ b = 1$ 

# Resolución:

### **Del dato:**

$$\underline{sen} \ 24^{\circ} \cdot \underline{csc} \ \underline{a} = 1$$

$$\Rightarrow$$
  $a=24^{\circ}$ 

$$tan 36^{\circ} \cdot cot b = 1$$

### Remember:

 $sen \alpha \cdot csc \alpha = 1$ 

Calculamos: 
$$E = \frac{b}{a}$$

$$E=\frac{36}{24}$$

### Remember:

$$tan \beta \cdot cot \beta = 1$$

$$\therefore E = \frac{3}{2}$$

Halle el valor de x, si:  $tan 8x \cdot cot(2x + 66^{\circ}) = 1$ 

# Resolución:

### **Del dato:**

$$tan 8x \cdot cot(2x + 66^{\circ}) = 1$$

$$\Rightarrow 8x = 2x + 66^{\circ}$$

$$6x = 66^{\circ}$$

$$\therefore x = 11^{\circ}$$

### **Remember:**

$$tan \alpha \cdot cot \alpha = 1$$

Sabiendo que:  $sen 12x \cdot csc(4x + 40^{\circ}) - 1 = 0$ 

Determine:  $P = sen 6x \cdot csc(8x - 10^{\circ})$ 

## Resolución:

### **Del dato:**

$$sen 12x \cdot csc(4x + 40^{\circ}) - 1 = 0$$

$$sen 12x \cdot csc(4x + 40^{\circ}) = 1$$

$$12x = 4x + 40^{\circ}$$

$$8x = 40^{\circ}$$

$$x = 5^{\circ}$$

### **Calculamos:**

$$P = sen 6x \cdot csc(8x - 10^{\circ})$$

$$P = sen 6(5^{\circ}) \cdot csc(8(5^{\circ}) - 10^{\circ})$$

$$P = sen 30^{\circ} \cdot csc(30^{\circ})$$

$$\therefore P=1$$

### Remember:

$$sen \alpha \cdot csc \alpha = 1$$

Rodrigo es un niño al que le gusta cuidar su salud, diariamente sale a correr 50 min alrededor del parque que esta cerca a su casa (el parque tiene forma rectangular, ver figura). Determine cuantos metros recorre en una 3 vueltas al parque.

$$40 \tan 45^{\circ} m = 40 \times (1)$$

$$40 \tan 45^{\circ} m = 40m$$

$$120\cos 60^{\circ} m = 120 \times \begin{pmatrix} 1 \\ 7 \end{pmatrix}_{1}$$

### En una vuelta recorrerá:

$$1V = 40m + 60m + 40m + 60m$$

$$\Rightarrow 1V = 200 m$$
