1st SECONDARY

**HELICOSESORÍA** 

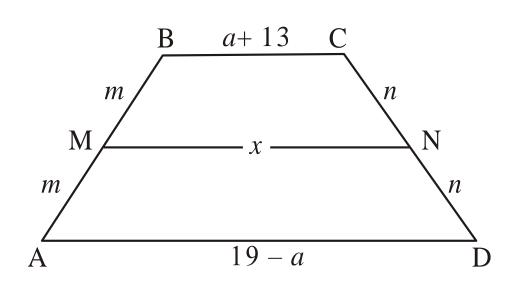

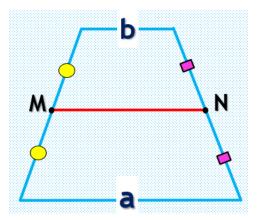

# 1. Si ABCD es un trapecio $\overline{BC}$ // $\overline{AD}$ , Calcular la longitud de la mediana.

## MN BASE MEDIA DEL TRAPECIO

# Nos piden: La mediana MN

$$MN = \frac{a+b}{2}$$

$$x = \frac{a/4 \cdot 13 + 19 - a/2}{2}$$

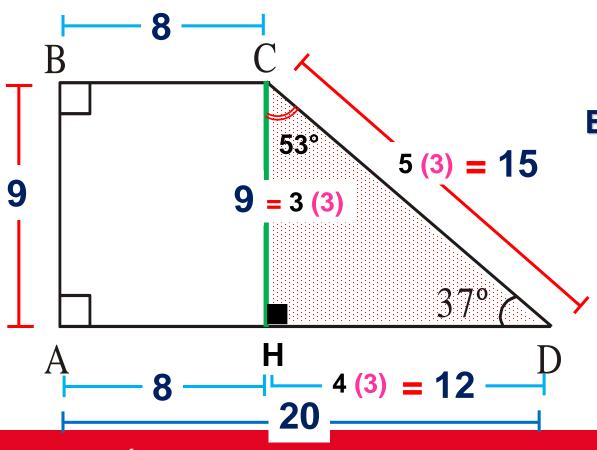

$$x = \frac{32}{2}$$

$$x = 16$$

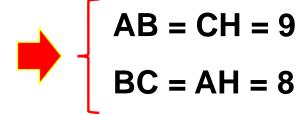

2. En el trapecio rectángulo ABCD es un trapecio  $\overline{BC}$  //  $\overline{AD}$ , AB = 9, BC= 8. Hallar AD + CD.

Se traza la altura CH

En el rectángulo ABCH

**En el** ∠ **CHD** (Notable 37° - 53°)

$$HD = 12$$
  $CD = 15$ 

Además:

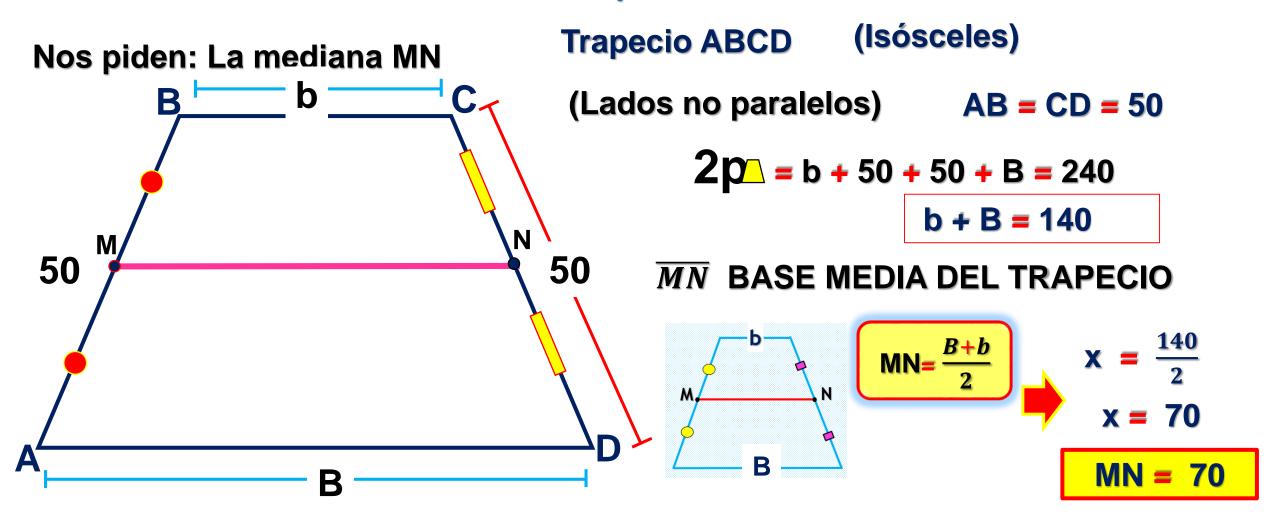

$$AD = AH + HD$$
  
 $AD = 8 + 12 = 20$ 

$$AD + CD = 20 + 15$$

$$AD + CD = 35$$

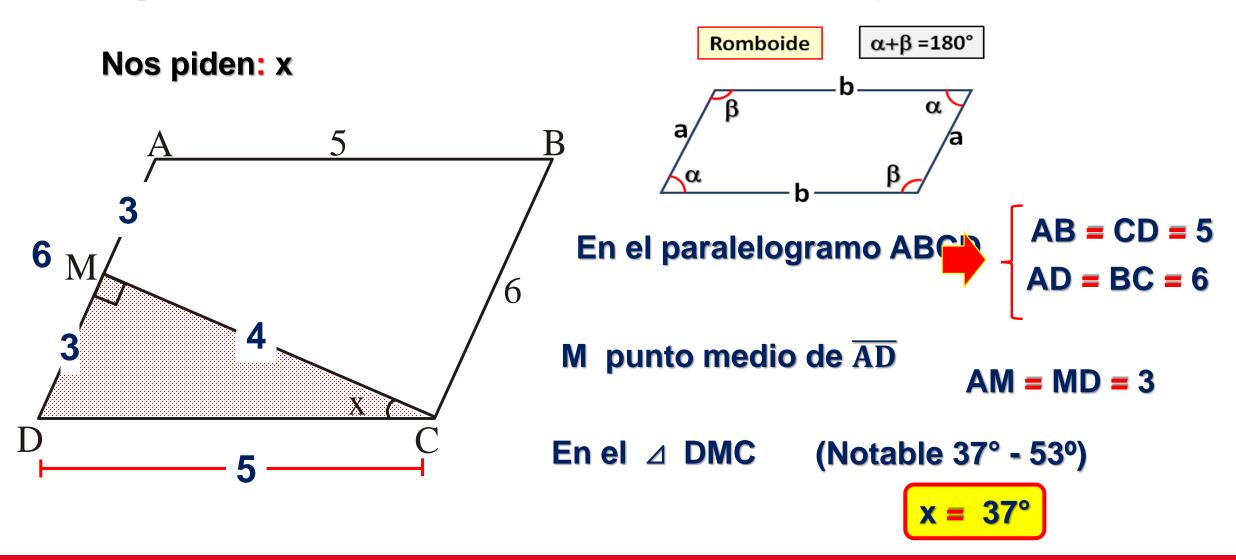

3.El perímetro de un trapecio isósceles es de 240,  $\overline{BC}$  //  $\overline{AD}$ . Calcular le medida de la mediana si cada lado no paralelo mide 50.

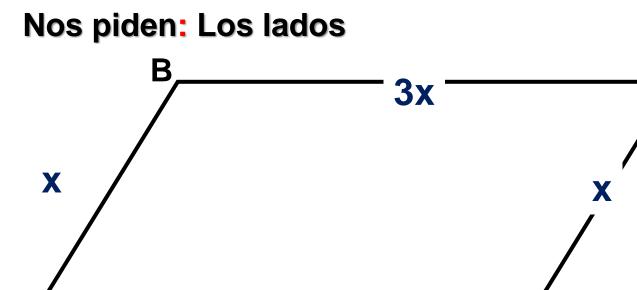

# 4.En el gráfico: ABCD es un romboide. Calcular x. M es punto medio de AD

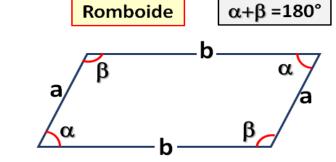

# 5. El perímetro de un paralelogramo es de 64 cm y dos de sus lados consecutivos están en la relación de 1 a 3. Cuanto miden los lados

3x

Relación de lados de 1 a 3

$$AB = x$$

$$AD = 3x$$

En el paralelogramo ABCD

$$AB = CD = x$$

$$AD = BC = 3x$$

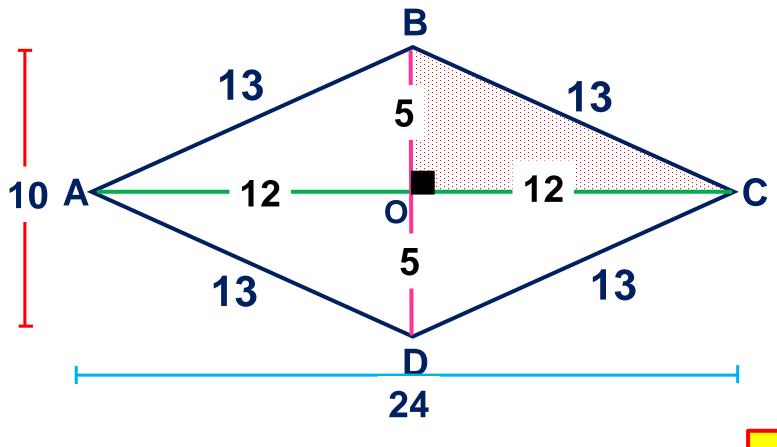

$$AB = 8$$

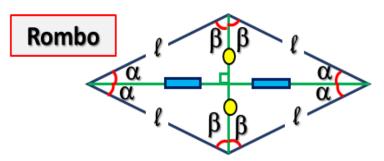

$$AD = 24$$

# 6. Calcular el perímetro de un rombo, si sus diagonales miden 10m y 24m

En el rombo

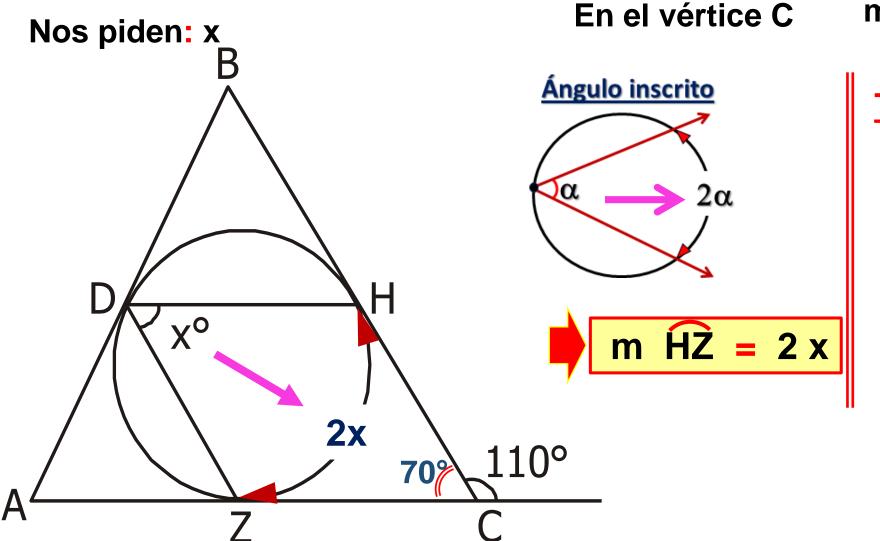

$$A0 = OC = 12$$
  $BO = OD = 5$ 

En el ∠ CHD
 (Teor. Pitágoras)

$$12^{2} + 5^{2} = BC^{2}$$
 $13 = BC$ 

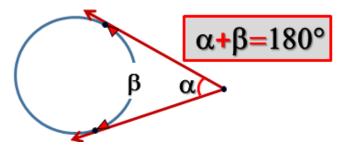

# 7.En el grafico, D, H, Z son puntos de tangencia, halle le valor de x.

$$m < C + 110^{\circ} = 180^{\circ}$$
  
 $m < C = 70^{\circ}$ 

## **TEOREMA**

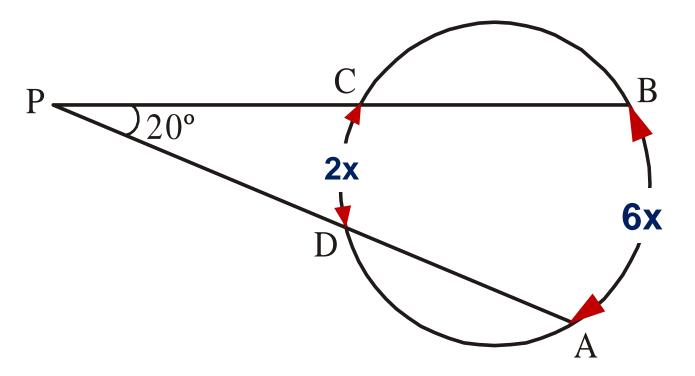

$$2 x + 70^{\circ} = 180^{\circ}$$
  
 $2 x = 110^{\circ}$ 

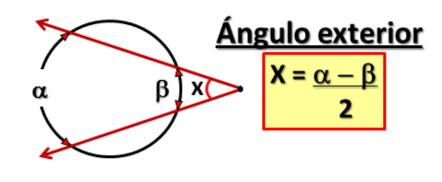

$$x = 55^{\circ}$$

# 8. Del gráfico, calcular x, si $\widehat{AB} = 6x$ y $\widehat{CD} = 2x$

$$20^{\circ} = \frac{6x - 2x}{2}$$

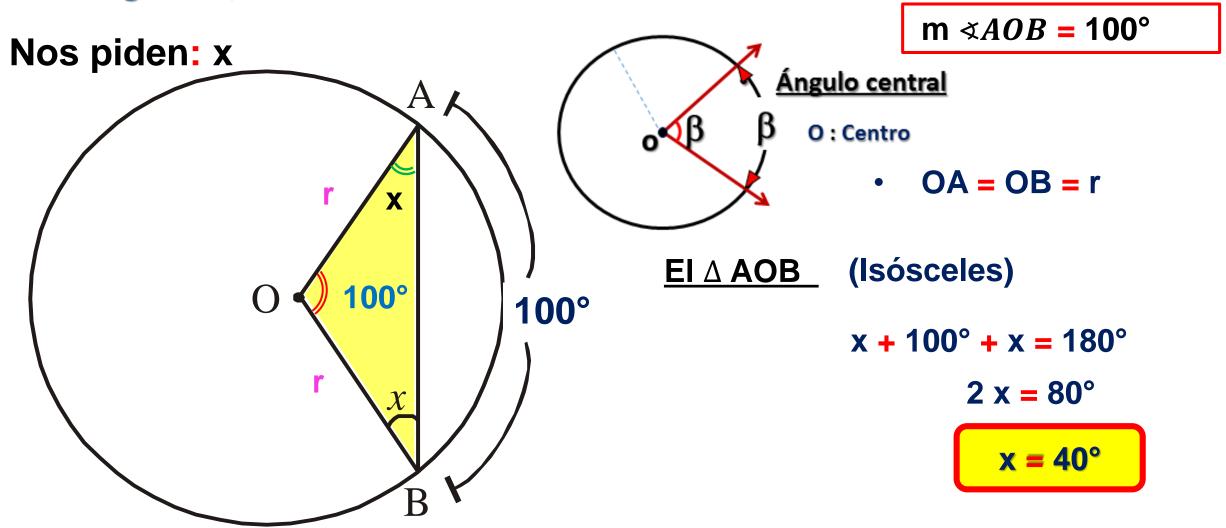

$$20^{\circ} = \frac{4x}{2}$$

$$20^{\circ} = 2 x$$

$$x = 10^{\circ}$$

# 9.En el gráfico, O es el centro. Halle el valor de x

## 10.En la circunferencia, AP = BP. Halle el valor de x.
